

Question:

Kylar went to the store to buy glasses for his new apartment. One glass costs \$5, but every second glass costs only 60% of the price. Kylar wants to buy 16 glasses. How much does he need to pay for them?

Reasoning + Answer:

<think>
he paid $5 * 1 = 5$
he paid $5 * 0.6 = 3$
he bought $1 + 1 = 2$
he paid $5 + 3 = 8$ for 2
he paid $8 * 1 = 8$
he bought $1 + 1 = 2$
he paid $8 * 0.6 = 4.8$
he paid $8 + 4.8 = 12.8$ for 2
he paid $5 + 3 + 8 + 4.8 = 20.8$
he bought $16 / 2 = 8$
he paid $20.8 * 8$
 $20.8 * 8 = 167.04$
he paid 167.04
he needs to pay 167.04
</think><answer>167.04</answer>
