

Question:

Josh decides to try flipping a house. He buys a house for \$80,000 and then puts in \$50,000 in repairs. This increased the value of the house by 150%. How much profit did he make?

Reasoning + Answer:

<think>

the initial value of the house is \$80,000

Josh puts in \$50,000 for repairs

the value of the house increases by 150% after the repairs

this means the value of the house becomes 150% of its initial value

150% of \$80,000 is $1.5 * 80,000 = \$120,000$

the total cost of the house is the initial value plus the repairs, which is $80,000 + 50,000 = \$130,000$

the profit is the selling price minus the total cost

the selling price is \$120,000

the profit is $120,000 - 130,000 = -\$10,000$

</think><answer>

-10000

</answer>
