

Question:

A merchant wants to make a choice of purchase between 2 purchase plans: jewelry worth \$5,000 or electronic gadgets worth \$8,000. His financial advisor speculates that the jewelry market will go up 2.5% while the electronic gadgets market will rise 1.2% within the same month. If the merchant is looking to maximize profit at the end of this month by making a choice, how much profit would this be?

Reasoning + Answer:

<think>
the profit from the jewelry purchase would be $5000 * 0.025 = 125$
the profit from the electronic gadgets purchase would be $8000 * 0.012 = 96$
the difference in profit between the two options is $125 - 96 = 29$
</think>
< answer >
29
</answer>
