

Question:

Eliza's rate per hour for the first 40 hours she works each week is \$10. She also receives an overtime pay of 1.2 times her regular hourly rate. If Eliza worked for 45 hours this week, how much are her earnings for this week?

Reasoning + Answer:

<think>
Regular earnings for the first 40 hours = $40 * 10 = 400$ dollars
Overtime hours worked = $45 - 40 = 5$ hours
Overtime pay rate = $10 * 1.2 = 12$ dollars per hour
Earnings for overtime hours = $5 * 12 = 60$ dollars
Total earnings = Regular earnings + Earnings for overtime hours = $400 + 60 = 460$ dollars
</think><answer>
460 </answer>
