

Question:

Janet’s ducks lay 16 eggs per day. She eats three for breakfast every morning and bakes muffins for her friends every day with four. She sells the remainder at the farmers' market daily for \$2 per fresh duck egg. How much in dollars does she make every day at the farmers' market?

Reasoning + Answer:

<think>To start , we need to determine the total number of eggs laid per day , which is 1 6 .

Next , we need to subtract the number of eggs eaten for breakfast , which is 3 .

So , 1 6 - 3 = 1 3 .

Then , we need to subtract the number of eggs used for baking muffins , which is 4 .

So , 1 3 - 4 = 9 .

Now , we know that she sells the remaining eggs at the farmers ' market . She sells each egg for \$ 2 .

Hence , her earnings every day would be 9 * 2 = 1 8 dollars .

So , the amount Janet makes every day at the farmers ' market is 1 8 dollars . </think>

<answer> 1 8 </answer>
