

Question:

James decides to run 3 sprints 3 times a week. He runs 60 meters each sprint. How many total meters does he run a week?

Reasoning + Answer:

<think>To start, I need to find out how many meters James runs in a week. He runs 3 sprints every day, and each sprint is 60 meters long. So, the total meters he runs in one day is $3 * 60$.

Since he runs 3 times a week, I multiply the total meters he runs in a day by 3 to find the total meters he runs in a week.

So, the total meters he runs in a week is $(3 * 60) * 3$.

Let's do the math:

$$3 * 60 = 180$$

$$(3 * 60) * 3 = 180 * 3 = 540$$

So, James runs a total of 540 meters in a week. </think>

<answer>540</answer>
