

Question:

Eliza's rate per hour for the first 40 hours she works each week is \$10. She also receives an overtime pay of 1.2 times her regular hourly rate. If Eliza worked for 45 hours this week, how much are her earnings for this week?

Reasoning + Answer:

<think>To begin, Eliza's regular pay for the first 40 hours is calculated as follows: $40 * 10 = 400$.

For the remaining 5 hours, she gets an overtime pay, which is 1.2 times her regular hourly rate.

Therefore, her overtime pay is $5 * (10 * 1.2) = 5 * 12 = 60$.

Finally, to find her total earnings for the week, we add the regular pay and the overtime pay: $400 + 60 = 460$.

<answer>460</answer>
