

Question:

Janet’s ducks lay 16 eggs per day. She eats three for breakfast every morning and bakes muffins for her friends every day with four. She sells the remainder at the farmers' market daily for \$2 per fresh duck egg. How much in dollars does she make every day at the farmers' market?

Reasoning + Answer:

<think>To begin , we need to find out how many eggs Janet has left after eating and baking . She starts with 16 eggs each day . She eats 3 eggs for breakfast and bakes 4 eggs .

So , the total eggs used up in a day is 3 (eaten) + 4 (baked) = 7 eggs .

This means she has 16 - 7 = 9 eggs left .

She sells the remainder at the farmers ' market for \$ 2 per egg .

Therefore , the total money she makes is 9 (remaining eggs) * \$ 2 (price per egg) = \$ 18 .

So , the amount she makes every day at the market is \$ 18 .</think>

<answer>\$ 18 </answer>
