

Question:

A robe takes 2 bolts of blue fiber and half that much white fiber. How many bolts in total does it take?

Reasoning + Answer:

<think>To start, we know that the robe takes 2 bolts of blue fiber.

It also takes half as much white fiber as blue fiber, which means it takes $2 / 2 = 1$ bolt of white fiber.

To find the total number of bolts, we add the blue and white fibers together: $2 \text{ (blue)} + 1 \text{ (white)} = 3$ bolts.</think>

<answer> 3 bolts </answer>
