

Question:

Josh decides to try flipping a house. He buys a house for \$80,000 and then puts in \$50,000 in repairs. This increased the value of the house by 150%. How much profit did he make?

Reasoning + Answer:

<think>

the initial value of the house was 80000

the increase in value is 150% of 80000 which is $150/100 * 80000 = 120000$

the total value of the house after the increase is $80000 + 120000 = 200000$

the total cost including the purchase price and the repairs is $80000 + 50000 = 130000$

the profit is the final value minus the total cost which is $200000 - 130000 = 70000$

</think>

<answer> 70000 </answer>
