

Question:

Kylar went to the store to buy glasses for his new apartment. One glass costs \$5, but every second glass costs only 60% of the price. Kylar wants to buy 16 glasses. How much does he need to pay for them?

Reasoning + Answer:

<think>
the first glass costs 5 dollars
the second glass costs $5 * 0.6 = 3$ dollars
the third glass costs 5 dollars
the fourth glass costs $5 * 0.6 = 3$ dollars
and so on
so , the total cost is $5 + 3 + 5 + 3 + 5 + 3 + 5 + 3 + 5 + 3 + 5 + 3 + 5 + 3 + 5 + 3$
which is $16 / 2 * 5 + 16 / 2 * 3 = 8 * 5 + 8 * 3 = 40 + 24$
the total cost is 64
</think>
<answer> 64 </answer>
