

Question:

Eliza's rate per hour for the first 40 hours she works each week is \$10. She also receives an overtime pay of 1.2 times her regular hourly rate. If Eliza worked for 45 hours this week, how much are her earnings for this week?

Reasoning + Answer:

<think>
the regular working hours are 40 , so Eliza worked 5 hours of overtime
the overtime pay rate is $1.2 * 10 = 12$ dollars per hour
the total earnings for the regular hours are $40 * 10 = 400$ dollars
the total earnings for the overtime hours are $5 * 12 = 60$ dollars
the total earnings for the week are $400 + 60 = 460$ dollars
</think>
< answer > 460 </answer>
