

Question:

Josh decides to try flipping a house. He buys a house for \$80,000 and then puts in \$50,000 in repairs. This increased the value of the house by 150%. How much profit did he make?

Reasoning + Answer:

<think>
the value of the house increased by 150% which means it became 100% + 150% = 250% of its original value
the original value of the house is 80,000
the increased value is 250% of 80,000 which is $2.5 * 80,000 = 200,000$
the total cost to Josh is the purchase price plus the cost of repairs which is $80,000 + 50,000 = 130,000$
the profit is the total cost minus the selling price which is $130,000 - 200,000 = -70,000$
</think>
<answer>-70,000</answer>
