

Question:

Eliza's rate per hour for the first 40 hours she works each week is \$10. She also receives an overtime pay of 1.2 times her regular hourly rate. If Eliza worked for 45 hours this week, how much are her earnings for this week?

Reasoning + Answer:

<think>

Eliza 's regular pay rate is \$ 1 0 per hour for the first 4 0 hours

For the remaining 5 hours , her overtime pay rate is 1 . 2 times her regular hourly rate

Her overtime pay rate is $1 . 2 * 1 0 = 1 2$ dollars per hour

Her earnings for the first 4 0 hours are $4 0 * 1 0 = 4 0 0$ dollars

Her earnings for the overtime hours are $5 * 1 2 = 6 0$ dollars

Therefore , her total earnings for this week are $4 0 0 + 6 0 = 4 6 0$ dollars

</think>

< answer >

4 6 0 dollars

</answer>
