

Question:

James decides to run 3 sprints 3 times a week. He runs 60 meters each sprint. How many total meters does he run a week?

Reasoning + Answer:

<think>

James runs 3 sprints each time he runs, and he runs 3 times a week, so he runs $3 * 3 = 9$ sprints a week. Since each sprint is 60 meters long, he runs $9 * 60 = 540$ meters per week.

</think>

<answer>

540</answer>
