

Question:

Kylar went to the store to buy glasses for his new apartment. One glass costs \$5, but every second glass costs only 60% of the price. Kylar wants to buy 16 glasses. How much does he need to pay for them?

Reasoning + Answer:

<think>
Kylar buys 16 glasses . Every second glass costs only 60% of the price of a regular glass .
Kylar buys $16 / 2 = 8$ glasses at 60% of the price .
The cost of one regular glass is 5 dollars .
Therefore , the cost of each second glass is $5 * 0.6 = 3$ dollars .
Kylar buys 8 glasses at 3 dollars each and 8 glasses at 5 dollars each .
The total cost is $8 * 3 + 8 * 5 = 24 + 40 = 64$ dollars .

</think>
<answer>
64</answer>
