

Question:

Josh decides to try flipping a house. He buys a house for \$80,000 and then puts in \$50,000 in repairs. This increased the value of the house by 150%. How much profit did he make?

Reasoning + Answer:

<think>
the house's initial value was 80,000 .
Josh added 50,000 to the value , which makes the total $80,000 + 50,000 = 130,000$.
The increase in value was 150% of the initial value , so the increase is $130,000 - 80,000 = 50,000$.
.
Thus , the house's new value is 130,000 .
The profit is the increase in value , which is 50,000 .
</think>
<answer>50000 </answer>
