

## Question:

James decides to run 3 sprints 3 times a week. He runs 60 meters each sprint. How many total meters does he run a week?

## Reasoning + Answer:

<think> To find the total meters James runs in a week, first calculate the meters he runs in one session (3 sprints). Since each sprint is 60 meters and he runs 3 sprints, the total meters in one session is  $(60 \times 3 = 180)$  meters. As he runs 3 sessions a week, the total meters he runs in a week is  $(180 \times 3 = 540)$  meters. </think>

<answer>540</answer>
