

**Question:**

Stephen placed an online order for groceries. His final bill came to \$40.00. Because this was through a delivery vendor, they tacked on a 25% fee to his final total and charged him \$3.00 in delivery fees. Stephen also added a \$4.00 tip. After the extra fees, what was the final price of Stephen's groceries?

**Reasoning + Answer:**

<tool\_call> Reasoning process here :

- Step 1 : Understand the structure of the bill .
- Stephen 's original order total is \$ 4 0 . 0 0 .
  - The delivery vendor adds a 2 5 % fee on the original order total .
  - They also charge a flat \$ 3 . 0 0 delivery fee .
  - Stephen adds a \$ 4 . 0 0 tip .

Step 2 : Calculate the 2 5 % fee on the original \$ 4 0 . 0 0 .

$$25 \% \text{ of } \$ 40.00 = (25 / 100) \times 40 = 0.25 \times 40 = \$ 10.00$$

Step 3 : Add the 2 5 % fee and the delivery fee to the original total .

So , the total before tip = \$ 4 0 . 0 0 + \$ 1 0 . 0 0 ( fee ) + \$ 3 . 0 0 ( delivery ) = \$ 5 3 . 0 0

Step 4 : Add the tip .

$$\text{Final total} = \$ 53.00 + \$ 4.00 = \$ 57.00$$

Therefore , the final price Stephen paid is \$ 5 7 . 0 0 .

< answer > 5 7 < / answer >
