

Question:

Stephen placed an online order for groceries. His final bill came to \$40.00. Because this was through a delivery vendor, they tacked on a 25% fee to his final total and charged him \$3.00 in delivery fees. Stephen also added a \$4.00 tip. After the extra fees, what was the final price of Stephen's groceries?

Reasoning + Answer:

We are given :

- Stephen 's original grocery order total : \$ 4 0 . 0 0
- A 2 5 % fee was added to the final total (this is a fee on the original amount)
- A \$ 3 . 0 0 delivery fee
- A \$ 4 . 0 0 tip

We are to find the **final price** of Stephen 's groceries **after all fees and the tip** .

Let’s break it down step by step .

Step 1 : Calculate the 2 5 % fee on the original order

The 2 5 % fee is applied to the original \$ 4 0 . 0 0 :

\$\$
 $25\% \text{ of } 40 = 0.25 \times 40 = 10$
\$\$

So the fee added is \$ 1 0 . 0 0 .

Step 2 : Add the delivery fee

Delivery fee : \$ 3 . 0 0

Step 3 : Add the tip

Tip : \$ 4 . 0 0

Step 4 : Total final amount

Now , sum up all the amounts :

Original order : \$ 4 0 . 0 0
+ 2 5 % fee : \$ 1 0 . 0 0
+ Delivery fee : \$ 3 . 0 0
+ Tip : \$ 4 . 0 0

\$\$
 $40 + 10 + 3 + 4 = 57$
\$\$

So , the final price Stephen paid is \$ 5 7 . 0 0 .

< answer > 5 7 </ answer >
