

Question:

Jill gets paid \$20 per hour to teach and \$30 to be a cheerleading coach. If she works 50 weeks a year, 35 hours a week as a teacher and 15 hours a week as a coach, what's her annual salary?

Reasoning + Answer:

Let's break down Jill's annual salary based on her two jobs .

1 . Teacher Earnings

- Hourly rate as a teacher : \$ 2 0
- Hours per week as a teacher : 3 5
- Weeks per year : 5 0

So , teacher earnings per year :

$$20 \text{ dollars/hour} \times 35 \text{ hours/week} \times 50 \text{ weeks/year}$$

$$= 20 \times 35 \times 50$$

First , $20 \times 35 = 700$ \$
Then , $700 \times 50 = 35,000$ \$

So , teacher earnings = \$ 35 , 000

2 . Cheerleading Coach Earnings

- Payment per week : \$ 30 (not hourly)
- Hours per week : 1 5 , but it's a flat \$ 30 per week as a coach

So , coach earnings per year :

$$30 \text{ dollars/week} \times 50 \text{ weeks/year} = 1,500$$

Total Annual Salary :
$$35,000 + 1,500 = 36,500$$

Final answer :
< answer > 36500 </ answer >
