

Question:

James decides to run 3 sprints 3 times a week. He runs 60 meters each sprint. How many total meters does he run a week?

Reasoning + Answer:

<think>
He runs 3 sprints 3 times a week so that's $3 * 3 = 9$ sprints. Each sprint is 60 meters and he runs 9 sprints so that is $60 * 9 = 540$ meters.
</think>
<answer> 540 meters </answer>
