

Question:

Eliza's rate per hour for the first 40 hours she works each week is \$10. She also receives an overtime pay of 1.2 times her regular hourly rate. If Eliza worked for 45 hours this week, how much are her earnings for this week?

Reasoning + Answer:

<think>
She worked for 5 hours overtime because $45 - 40 = 5$
Her overtime pay is \$12 because $10 \times 1.2 = 12$
She earned \$50 for the regular hours because $40 \times 10 = 400$
She earned \$60 for the overtime because $5 \times 12 = 60$
She earned \$560 in total because $400 + 60 = 460$
</think>
<answer>
\$560
</answer>
