

Question:

Janet’s ducks lay 16 eggs per day. She eats three for breakfast every morning and bakes muffins for her friends every day with four. She sells the remainder at the farmers' market daily for \$2 per fresh duck egg. How much in dollars does she make every day at the farmers' market?

Reasoning + Answer:

Let's break down the problem step by step .

1 . **Calculate the total number of eggs laid by Janet's ducks per day : **

- Janet's ducks lay 16 eggs per day .

2 . **Determine the number of eggs Janet uses : **

- Janet eats 3 eggs for breakfast every morning .

- She uses 4 eggs to bake muffins for her friends every day .

- Therefore , the total number of eggs Janet uses is :

$$\begin{aligned} & \text{\\[} \\ & 3 + 4 = 7 \text{ \\text{ \\text{ eggs per day } } } \\ & \text{\\]} \end{aligned}$$

3 . **Calculate the number of eggs remaining after Janet uses some : **

- The number of eggs remaining after Janet uses 7 eggs is :

$$\begin{aligned} & \text{\\[} \\ & 16 - 7 = 9 \text{ \\text{ \\text{ eggs per day } } } \\ & \text{\\]} \end{aligned}$$

4 . **Determine how much Janet makes from selling the remaining eggs : **

- Janet sells the remaining 9 eggs at the farmers ' market .

- She sells each egg for \$ 2 .

- Therefore , the total amount of money she makes from selling the eggs is :

$$\begin{aligned} & \text{\\[} \\ & 9 \times 2 = 18 \text{ \\text{ \\text{ dollars per day } } } \\ & \text{\\]} \end{aligned}$$

<think >

- Janet's ducks lay 16 eggs per day .

- She uses 3 eggs for breakfast and 4 eggs for muffins , which totals 7 eggs .

- Therefore , 16 - 7 = 9 eggs remain .

- She sells each of these 9 eggs for \$ 2 , so 9 * \$ 2 = \$ 18 .

</think >

< answer > 18 </answer >
