

Question:
A robe takes 2 bolts of blue fiber and half that much white fiber. How many bolts in total does it take?

Reasoning + Answer:

Let's break down the problem step by step .

1. **** Identify the amount of blue fiber needed : ****

- The problem states that a robe takes 2 bolts of blue fiber .

2. **** Calculate the amount of white fiber needed : ****

- The problem also states that the amount of white fiber needed is half the amount of blue fiber .

- Since 2 bolts of blue fiber are needed , half of that would be :

$$\begin{aligned} & \backslash[\\ & \backslashfrac{2}{2} = 1 \text{ bolt} \\ & \backslash] \end{aligned}$$

3. **** Sum the total amount of fiber needed : ****

- The total amount of fiber needed is the sum of the blue fiber and the white fiber .

- Therefore , the total amount of fiber is :

$$\begin{aligned} & \backslash[\\ & 2 \text{ (blue fiber)} + 1 \text{ (white fiber)} = 3 \text{ bolts} \\ & \backslash] \end{aligned}$$

<think>

- The robe requires 2 bolts of blue fiber .

- The white fiber required is half of the blue fiber , which is 1 bolt .

- Therefore , the total amount of fiber needed is 3 bolts .

</think>

<answer> 3 </answer>
