

Question:

Every day, Wendi feeds each of her chickens three cups of mixed chicken feed, containing seeds, mealworms and vegetables to help keep them healthy. She gives the chickens their feed in three separate meals. In the morning, she gives her flock of chickens 15 cups of feed. In the afternoon, she gives her chickens another 25 cups of feed. How many cups of feed does she need to give her chickens in the final meal of the day if the size of Wendi's flock is 20 chickens?

Reasoning + Answer:

Let's break down the problem step by step .

1. **Determine the total amount of feed needed per chicken per day : **

- Wendi feeds each chicken 3 cups of feed per day .

2. **Calculate the total amount of feed for the entire flock : **

- Wendi has 20 chickens .

- Therefore , the total feed needed for the entire flock per day is :

$$\begin{aligned} & \left[\right. \\ & 20 \text{ chickens} \times 3 \text{ cups/chicken} = 60 \text{ cups} \\ & \left. \right] \end{aligned}$$

3. **Calculate the amount of feed given in the morning and afternoon : **

- In the morning , Wendi gives 15 cups of feed .

- In the afternoon , Wendi gives 25 cups of feed .

- Therefore , the total amount of feed given in the morning and afternoon is :

$$\begin{aligned} & \left[\right. \\ & 15 \text{ cups} + 25 \text{ cups} = 40 \text{ cups} \\ & \left. \right] \end{aligned}$$

4. **Determine the remaining amount of feed needed for the evening meal : **

- The total feed needed for the day is 60 cups .

- The feed already given in the morning and afternoon is 40 cups .

- Therefore , the remaining amount of feed needed for the evening meal is :

$$\begin{aligned} & \left[\right. \\ & 60 \text{ cups} - 40 \text{ cups} = 20 \text{ cups} \\ & \left. \right] \end{aligned}$$

Thus , Wendi needs to give her chickens 20 cups of feed in the final meal of the day .

<think >

- Wendi feeds each chicken 3 cups of feed per day .

- With 20 chickens , the total feed needed is 60 cups .

- She gives 15 cups in the morning and 25 cups in the afternoon , totaling 40 cups .

- Therefore , the remaining feed needed for the evening meal is 20 cups .

</think >

< answer > 20 </answer >
