

Question:

Janet’s ducks lay 16 eggs per day. She eats three for breakfast every morning and bakes muffins for her friends every day with four. She sells the remainder at the farmers' market daily for \$2 per fresh duck egg. How much in dollars does she make every day at the farmers' market?

Reasoning + Answer:

Let's break down the problem step by step .

1 . ** Calculate the total number of eggs Janet has each day : **

- Janet's ducks lay 16 eggs per day .

2 . ** Determine how many eggs Janet uses for breakfast : **

- Janet eats 3 eggs for breakfast every morning .

3 . ** Determine how many eggs Janet uses for baking muffins : **

- Janet bakes muffins for her friends with 4 eggs every day .

4 . ** Calculate the total number of eggs Janet uses : **

- The total number of eggs used is the sum of the eggs used for breakfast and the eggs used for baking muffins .

- Total eggs used = 3 (for breakfast) + 4 (for baking muffins) = 7 eggs .

5 . ** Calculate the number of eggs remaining after Janet uses some for breakfast and baking : **

- The remaining number of eggs is the total number of eggs laid minus the total number of eggs used .

- Remaining eggs = 16 (total laid) - 7 (used) = 9 eggs .

6 . ** Calculate the revenue from selling the remaining eggs : **

- Janet sells the remaining 9 eggs at the farmers ' market for \$ 2 per egg .

- Revenue = 9 (remaining eggs) * \$ 2 (price per egg) = \$ 18 .

<think >

- Janet's ducks lay 16 eggs per day .

- She eats 3 eggs for breakfast and bakes muffins with 4 eggs , so she uses 7 eggs in total .

- Therefore , she has 9 eggs left to sell .

- She sells these 9 eggs for \$ 2 each , making \$ 18 in total .

</think >

< answer > \$ 18 </ answer >
