

Question:
A robe takes 2 bolts of blue fiber and half that much white fiber. How many bolts in total does it take?

Reasoning + Answer:

Let's break down the problem step by step .

- 1 . ****Identify the amount of blue fiber needed : ****
- The problem states that a robe takes 2 bolts of blue fiber .
 - So , the amount of blue fiber is 2 bolts .

- 2 . ****Identify the amount of white fiber needed : ****
- The problem also states that the amount of white fiber is half the amount of blue fiber .
 - Since the blue fiber is 2 bolts , half of that would be :
- $$\frac{2}{2} = 1 \text{ bolt}$$
- So , the amount of white fiber is 1 bolt .

- 3 . ****Calculate the total amount of fiber needed : ****
- The total amount of fiber is the sum of the blue fiber and the white fiber .
 - Therefore , the total amount of fiber is :
- $$2 \text{ bolts (blue)} + 1 \text{ bolt (white)} = 3 \text{ bolts}$$

<think>

- We calculated that the robe requires 2 bolts of blue fiber and 1 bolt of white fiber .
- The total amount of fiber needed is the sum of these two amounts .

</think>

<answer> 3 bolts </answer>
