

Question:

Josh decides to try flipping a house. He buys a house for \$80,000 and then puts in \$50,000 in repairs. This increased the value of the house by 150%. How much profit did he make?

Reasoning + Answer:

<think>

Purchase cost of house = \$80,000

Cost of repairs = \$50,000

Total investment = \$80,000 + \$50,000 = \$130,000

Value increase = 150% of \$80,000 = 1.5 * \$80,000 = \$120,000

New value of house = \$80,000 + \$120,000 = \$200,000

Profit = New value of house - Total investment = \$200,000 - \$130,000 = \$70,000

</think>

<answer>70000</answer>
