

Question:

James decides to run 3 sprints 3 times a week. He runs 60 meters each sprint. How many total meters does he run a week?

Reasoning + Answer:

<think>

Number of sprints per week is $3 \text{ sprints} * 3 \text{ times / week} = 9 \text{ sprints / week}$.

Distance run per week is $9 \text{ sprints / week} * 60 \text{ meters / sprint} = 540 \text{ meters / week}$.

</think><answer>540</answer>
