

Question:

Every day, Wendi feeds each of her chickens three cups of mixed chicken feed, containing seeds, mealworms and vegetables to help keep them healthy. She gives the chickens their feed in three separate meals. In the morning, she gives her flock of chickens 15 cups of feed. In the afternoon, she gives her chickens another 25 cups of feed. How many cups of feed does she need to give her chickens in the final meal of the day if the size of Wendi's flock is 20 chickens?

Reasoning + Answer:

`<think>`

Feed given in the morning = 15 cups

Feed given in the afternoon = 25 cups

Total feed given in the morning and afternoon = 15 + 25 = 40 cups

Each chicken is given 3 cups of feed a day

Total feed required for 20 chickens = 20 * 3 = 60 cups

Total feed given in the morning and afternoon = 40 cups

Final meal feed requirement = Total feed required for 20 chickens - Total feed given in the morning and afternoon = 60 - 40 = 20 cups

`</think><answer>20</answer>`
