

Question:

Carla is downloading a 200 GB file. Normally she can download 2 GB/minute, but 40% of the way through the download, Windows forces a restart to install updates, which takes 20 minutes. Then Carla has to restart the download from the beginning. How long does it take to download the file?

Reasoning + Answer:

<think>

Total file size = 200 GB

Normal download rate = 2 GB / minute

40 % of 200 GB = 0.4 * 200 = 80 GB

Time to download 80 GB at 2 GB/min = 80 / 2 = 40 minutes

Restart takes = 20 minutes

After restart, the download starts from the beginning again, so another 200 GB to download at 2 GB

/min = 200 / 2 = 100 minutes

Total time = 40 minutes + 20 minutes + 100 minutes = 160 minutes

</think>

<answer>160</answer>
