

Question:

Carla is downloading a 200 GB file. Normally she can download 2 GB/minute, but 40% of the way through the download, Windows forces a restart to install updates, which takes 20 minutes. Then Carla has to restart the download from the beginning. How long does it take to download the file?

Reasoning + Answer:

<think>
Total file size = 200 GB
Normal download rate = 2 GB/min
40% of the file = $0.4 * 200 = 80$ GB
Time taken to download 40% of the file = $80 / 2 = 40$ minutes
Restart and Windows update installation = 20 minutes
Rest of the file = $200 - 80 = 120$ GB
Time taken to download the rest of the file = $120 / 2 = 60$ minutes
Total time = time to download 40% of the file + time for Windows update + time to download the rest of the file
= $40 + 20 + 60 = 120$ minutes
</think>
<answer>120</answer>
