

Question:

John drives for 3 hours at a speed of 60 mph and then turns around because he realizes he forgot something very important at home. He tries to get home in 4 hours but spends the first 2 hours in standstill traffic. He spends the next half-hour driving at a speed of 30mph, before being able to drive the remaining time of the 4 hours going at 80 mph. How far is he from home at the end of those 4 hours?

Reasoning + Answer:

<think>

Distance travelled in the first leg = 3 hours * 60 mph = 180 miles .
Distance travelled in the second leg (stand still traffic) = 0 miles .
Distance travelled in the third leg = 30 minutes * 1 / 2 hour * 30 mph = 45 miles .
Distance travelled in the fourth leg = 3 . 5 hours (out of 4) * 80 mph = 280 miles .
Total distance from home = 180 miles - (180 - 45 + 280) miles = 135 miles .

</think>

<answer>135</answer>
