

Question:

Josh decides to try flipping a house. He buys a house for \$80,000 and then puts in \$50,000 in repairs. This increased the value of the house by 150%. How much profit did he make?

Reasoning + Answer:

<think> To solve , first calculate the increased value of the house . A 150% increase means the value becomes 250% of the original value (100% original + 150% increase). Then subtract the total cost (purchase price + repairs) to find the profit . Original value of house = \$80,000 . Increased value = 250% of \$80,000 = $2.5 * \$80,000 = \$200,000$. Total cost = purchase price + repairs = \$80,000 + \$50,000 = \$130,000 . Profit = increased value - total cost = $\$200,000 - \$130,000 = \$70,000$. </think><answer>70000</answer>
