

Question:

Eliza's rate per hour for the first 40 hours she works each week is \$10. She also receives an overtime pay of 1.2 times her regular hourly rate. If Eliza worked for 45 hours this week, how much are her earnings for this week?

Reasoning + Answer:

<think> To solve , first calculate the regular pay for the first 40 hours , then calculate the overtime pay for the extra hours , and finally add both to get the total earnings . Regular pay = 40 hours * \$ 10 /hour . Overtime hours = 45 total hours - 40 regular hours = 5 hours . Overtime pay rate = 1 . 2 * \$ 10 /hour . Overtime pay = 5 hours * overtime pay rate . Total earnings = regular pay + overtime pay . Regular pay = 40 * 10 = \$ 400 . Overtime pay rate = 1 . 2 * 10 = \$ 12 /hour . Overtime pay = 5 * 12 = \$ 60 . Total earnings = 400 + 60 = \$ 460 . </think><answer> 460 </answer>
