

Question:

Eliza's rate per hour for the first 40 hours she works each week is \$10. She also receives an overtime pay of 1.2 times her regular hourly rate. If Eliza worked for 45 hours this week, how much are her earnings for this week?

Reasoning + Answer:

<think> To solve , first calculate the pay for the first 40 hours , then the overtime hours , and finally add them . For the first 40 hours , pay = 40 * \$ 10 . Overtime is for 5 hours (45 - 40) , so the pay for overtime is 5 * (10 * 1.2) . </think><think> Calculate the total . </think><answer> 490 </answer>
