

Question:

What are the minimum and maximum possible values of Glasgow Coma Score?

Answer Choices:

- A. Minimum = 3, Maximum = 15
- B. Minimum = 0, Maximum = 13
- C. Minimum = 0, Maximum = 15
- D. Minimum = 3, Maximum = 18

Reasoning + Answer:

<think> To determine the minimum and maximum possible values of the Glasgow Coma Score , we need to understand the scoring system . The Glasgow Coma Score is a neurological scale that assesses a patient's level of consciousness , consisting of three components : Eye Opening , Verbal Response , and Motor Response . Each component is scored from 1 to 4 , with 1 being the lowest and 4 being the highest . We need to find the minimum and maximum possible sum of these scores . The minimum score for each component is 1 , and the maximum score is 4 . So , the minimum total score would be $1 + 1 + 1 = 3$, and the maximum total score would be $4 + 4 + 4 = 12$. However , in some scoring systems , the total score can range from 0 to 15 , with 0 being the worst possible score . This might be because some scoring systems consider a score of 0 as a possible outcome for the verbal response component </think><answer> B . Minimum = 0 , Maximum = 15 </answer>
