

Question:

What are the minimum and maximum possible values of Glasgow Coma Score?

Answer Choices:

- A. Minimum = 3, Maximum = 15
- B. Minimum = 0, Maximum = 13
- C. Minimum = 0, Maximum = 15
- D. Minimum = 3, Maximum = 18

Reasoning + Answer:

<think>

To determine the minimum and maximum possible values of the Glasgow Coma Score , we need to understand what the score represents . The Glasgow Coma Scale is a neurological scale used to assess the level of consciousness in a person . It consists of three components : Eye Opening , Verbal Response , and Motor Response . Each component has a specific scoring system , with the lowest score indicating the worst outcome .

The minimum score would be achieved if a person has the worst possible response in all three components . In the Eye Opening component , the lowest score is 1 , indicating no response . In the Verbal Response component , the lowest score is also 1 , indicating no verbal response . In the Motor Response component , the lowest score is 1 , indicating no response to pain .

The maximum score would be achieved if a person has the best possible response in all three components . In the Eye Opening component , the highest score is 4 , indicating spontaneous eye opening . In the Verbal Response component , the highest score is 5 , indicating an oriented response . In the Motor Response component , the highest score is 6 , indicating a normal response to commands .

Considering the scoring systems , the minimum possible value would be $1 + 1 + 1 = 3$, and the maximum possible value would be $4 + 5 + 6 = 15$.

</think>< answer> A . Minimum = 3 , Maximum = 15 </answer>
