

Question:

What are the minimum and maximum possible values of Glasgow Coma Score?

Answer Choices:

- A. Minimum = 3, Maximum = 15
- B. Minimum = 0, Maximum = 13
- C. Minimum = 0, Maximum = 15
- D. Minimum = 3, Maximum = 18

Reasoning + Answer:

<think>

To determine the minimum and maximum possible values of the Glasgow Coma Score , we need to understand what the score represents . The Glasgow Coma Score is a scale used to assess the level of consciousness in a patient . It consists of three components : Eye Opening ( E ), Verbal Response ( V ), and Motor Response ( M ). Each component is scored from 1 to 4 , with 1 being the most severe and 4 being the least severe .

Eye Opening :

- 1 : None
- 2 : To pain
- 3 : To voice
- 4 : Spontaneously

Verbal Response :

- 1 : None
- 2 : Incomprehensible sounds
- 3 : Inappropriate words
- 4 : Oriented

Motor Response :

- 1 : None
- 2 : Abnormal flexion
- 3 : Extension
- 4 : Obeys commands

The minimum score would be when the patient shows the most severe symptoms , i.e. , no response to any stimuli , which would be 1 for all three components ( E , V , M ). The maximum score would be when the patient shows the least severe symptoms , i.e. , spontaneous eye opening , oriented verbal response , and obeys commands , which would be 4 for all three components ( E , V , M ).

Therefore , the minimum possible score would be  $1 + 1 + 1 = 3$  , and the maximum possible score would be  $4 + 4 + 4 = 12$  . However , considering the options provided , the correct maximum score seems to be 13 , which is likely due to an error in the options provided .</think><answer> B .  
Minimum = 0 , Maximum = 13
