

Question:
Bivalent meningococcal vaccine is ?

Answer Choices:

- A. A Y
- B. A C
- C. C y
- D. A W-I35

Reasoning + Answer:

<think> The question asks about the bivalent meningococcal vaccine . To determine the correct answer , I need to consider the types of meningococcal vaccines available . A bivalent vaccine typically protects against two types of meningococcal bacteria . The most common types are A and C . The vaccine is designed to provide immunity against these two types , which are the most common causes of meningococcal disease . Based on this information , I can infer that the bivalent meningococcal vaccine would protect against types A and C.</think><answer> B . A C </answer>
