

Question:

What are the minimum and maximum possible values of Glasgow Coma Score?

Answer Choices:

- A. Minimum = 3, Maximum = 15
- B. Minimum = 0, Maximum = 13
- C. Minimum = 0, Maximum = 15
- D. Minimum = 3, Maximum = 18

Reasoning + Answer:

<think> The Glasgow Coma Scale is a neurological scale used to assess the level of consciousness in a person following a brain injury or illness. It is composed of three components: eye opening, verbal response, and motor response. Each component is scored on a scale of 1 to 4, with 1 being the most severe and 4 being the least severe. To find the minimum possible value, we need to consider the lowest score for each component, which is 1. So, the minimum possible value is $1 + 1 + 1 = 3$. To find the maximum possible value, we need to consider the highest score for each component, which is 4. So, the maximum possible value is $4 + 4 + 4 = 12$. However, there are some modifications and variations of the Glasgow Coma Scale that may have slightly different maximum values. In some cases, the maximum value may be 15. Therefore, the correct answer is B. Minimum = 0, Maximum = 13
