

Question:
Bivalent meningococcal vaccine is ?
Answer Choices:

- A. A Y
- B. A C
- C. C y
- D. A W-I35

Reasoning + Answer:

<think> The question is asking about the bivalent meningococcal vaccine , which means it protects against two strains of the meningococcal bacteria . The options provided are combinations of serogroups A and C , A and W , and A and Y . To determine the correct answer , I need to consider the common combinations used in bivalent vaccines . Bivalent meningococcal vaccines are often used to protect against serogroups A and W or A and Y . The combination of A and C is not typically bivalent , and the option with I 35 is not a valid serogroup . </think><answer> A . A Y </answer>
