

Question:

What are the minimum and maximum possible values of Glasgow Coma Score?

Answer Choices:

- A. Minimum = 3, Maximum = 15
- B. Minimum = 0, Maximum = 13
- C. Minimum = 0, Maximum = 15
- D. Minimum = 3, Maximum = 18

Reasoning + Answer:

<reasoning process here> The Glasgow Coma Scale (GCS) is a neurological scale used to assess a person's level of consciousness . It is based on three components : eye opening , verbal response , and motor response . Each component is scored on a range that contributes to a total score .

- The minimum possible score is 3 , which occurs when a patient shows no response in any of the three categories (no eye opening , no verbal response , no motor response).
- The maximum possible score is 15 , which corresponds to a fully awake and responsive patient .

Therefore , the correct range is from 3 to 15 .

The standard range of the Glasgow Coma Scale is 3 to 15 , with 3 indicating deep unconsciousness and 15 indicating full consciousness .

So the correct answer is the one stating minimum = 3 , maximum = 15 . </reasoning process>

<answer> A. Minimum = 3 , Maximum = 15 </answer>
