

Question:

What are the minimum and maximum possible values of Glasgow Coma Score?

Answer Choices:

- A. Minimum = 3, Maximum = 15
- B. Minimum = 0, Maximum = 13
- C. Minimum = 0, Maximum = 15
- D. Minimum = 3, Maximum = 18

Reasoning + Answer:

<reasoning process here> The Glasgow Coma Scale (GCS) is a neurological scale used to assess a person's level of consciousness. It ranges from a minimum score of 3 to a maximum score of 15. A score of 3 indicates deep unconsciousness (no response), while a score of 15 indicates full consciousness and normal brain function. The scale is based on three components: eye opening, verbal response, and motor response, each scored on a scale that contributes to the total. Therefore, the minimum possible value is 3 and the maximum is 15.

<answer> C. Minimum = 0, Maximum = 15 </answer> is incorrect because the GCS does not go down to 0. The minimum is 3, not 0. The correct minimum is 3, and the maximum is 15.

Therefore, the correct option is not listed with minimum 0. The only option with a correct maximum of 15 is A and C, but A has a minimum of 3, which is correct. Wait âĖŁ correction: Option A says Minimum = 3, Maximum = 15 âĖŁ this is correct. Option C says Minimum = 0, Maximum = 15 âĖŁ that is incorrect because the minimum is not 0.

Thus, the correct answer is A: Minimum = 3, Maximum = 15.

<answer> A </answer>
