

Question:

A 50 years old patient presented to the skin OPD with erythematous scaly plaques over trunk and extremities for last 10 years. Lesions are occasionally itchy. There is history of remission and relapse with exacerbation during winters. Most likely diagnosis is?

Answer Choices:

- A. Lichen planus
- B. Psoriasis vulgaris
- C. Pityriasis rosea
- D. Seborrhic dermatitis

Reasoning + Answer:

<think>

The patient has chronic, erythematous, scaly plaques on the trunk and extremities with remissions and exacerbations, particularly in winter. These features are characteristic of psoriasis vulgaris.

</think>

<answer>B. Psoriasis vulgaris</answer>
