

Question:

Which of the following factors is associated with a decreased risk of Alzheimer's?

Answer Choices:

- A. Being African or Hispanic American
- B. A lower level of education
- C. Living in a city
- D. Being married
- E. Having a family history of Alzheimer's
- F. High intake of saturated fats
- G. Older age
- H. Eating fish
- I. Being a smoker
- J. Drinking alcohol regularly

Reasoning + Answer:

<think>

The factors associated with a decreased risk of Alzheimer's disease are generally related to lifestyle choices and demographic characteristics . Among the options provided , being married , having a higher level of education , and eating a balanced diet , such as one that includes fish , are known to be associated with a lower risk of Alzheimer's . However , the option that stands out as the most relevant to the question is " Eating fish " , as it is a well-established dietary factor that has been linked to a reduced risk of Alzheimer's disease .
