

Question:

The feedback loop in men which regulates the production of sex hormones includes all but which of the following?

Answer Choices:

- A. follicle-stimulating hormone
- B. oxytocin
- C. pituitary gland
- D. hypothalamus
- E. gonadotropin-releasing hormone
- F. luteinizing hormone
- G. testosterone

Reasoning + Answer:

<think>

The feedback loop in men that regulates the production of sex hormones involves a complex inter play between various endocrine glands and hormones . The hypothalamus and pituitary gland play a crucial role in this process . The hypothalamus secretes gonadotropin-releasing hormone (GnRH), which stimulates the pituitary gland to release luteinizing hormone (LH) and follicle-stimulating hormone (FSH). These hormones then regulate the production of sex hormones such as testosterone and estrogen . Oxytocin is primarily involved in social bonding and childbirth , not directly in the feedback loop regulating sex hormone production . Therefore , oxytocin is not part of this feedback loop .
