- J. A schizo-affective disorder is a mild form of schizophrenia that does not include affective symptoms.

Reasoning + Answer:

<think>
A schizo-affective disorder is a psychiatric condition that combines features of schizophrenia (psychotic symptoms) with mood disorders (such as depression or mania). It is characterized by the presence of psychotic symptoms , such as hallucinations or delusions , alongside mood symptoms , such as depressive or manic episodes . The symptoms of schizo-affective disorder can vary in severity and may include a range of cognitive , emotional , and behavioral symptoms . The condition can be challenging to diagnose and treat , as the symptoms can be similar to those of other conditions , such as bipolar disorder or schizophrenia . </think>
