

Question:

The feedback loop in men which regulates the production of sex hormones includes all but which of the following?

Answer Choices:

- A. follicle-stimulating hormone
- B. oxytocin
- C. pituitary gland
- D. hypothalamus
- E. gonadotropin-releasing hormone
- F. luteinizing hormone
- G. testosterone

Reasoning + Answer:

<think>
The feedback loop in men that regulates the production of sex hormones primarily involves the hypothalamus, pituitary gland, and gonadotropin-releasing hormone (GnRH). GnRH from the hypothalamus stimulates the release of follicle-stimulating hormone (FSH) and luteinizing hormone (LH) from the pituitary gland. FSH and LH then stimulate the testes to produce testosterone. Testosterone provides negative feedback to the hypothalamus and pituitary gland, which in turn reduces GnRH and FSH/LH secretion, thus maintaining a balance in sex hormone production. Oxytocin is primarily involved in social bonding and childbirth, and is not directly part of this feedback loop.
